

GHM21 PROTOCOL WHITEPAPER

Binance Smart Chain (BEP-20)

Internal Codename: SUNFLOWER

Core Motto: *Code is Law. Transparency is Trust. Trust the Math, Not Man.*

EXECUTIVE SUMMARY & SYSTEM DISCLAIMER

System Disclaimer & Risk Reality

- **Autonomous Execution:** GHM21 is an autonomous, decentralized peer-to-peer mutual aid protocol governed entirely by hardcoded smart contract logic. It is not a bank, an investment firm, a high-yield savings program, or a guaranteed financial product.
- **Non-Custodial Architecture:** All capital provided via a Provide Help (PH) action is transferred directly and non-custodially to another participant's wallet. There is no centralized liquidity pool, company treasury, or corporate safety net.
- **Spare Capital Participation:** Participants must only interact with the protocol using spare capital. Systemic velocity, yield decay, and volume-based halving adjustments dynamically alter clearing timelines based on community behavior.
- **Immutability:** Code is Law—once an action is recorded on the blockchain ledger, it cannot be reversed, modified, or refunded by any human entity.

1. FOUNDATIONAL PILLARS (THE HYBRID MODEL)

GHM21 combines proven cryptographic and decentralized finance mechanics into a single, automated engine:

- **Satoshi's Scarcity:** A mathematically hardcapped 21-million USDT lifecycle driven by volume-based halving cycles.
- **Sergey's Mutual Aid Ideology:** A peer-to-peer community wealth distribution framework.
- **Vitalik's Smart Contracts:** Autonomous, un-bribeable execution on the Binance Smart Chain.
- **CZ's P2P Exchange Mechanics:** Direct wallet-to-wallet transfer systems with active queue matching.
- **The Prometheus Zero-Balance Engine:** A strict non-custodial routing architecture that holds exactly \$0.00.

2. DECENTRALIZED ARCHITECTURE & SYSTEM DEBT ERASURE

Erasing Math Debt (Volume-Based Halvings)

To prevent systemic insolvency caused by fixed high yields, GHM21 reduces profit yields by **10% relative** for every **2.1 Million USDT** in cumulative volume. Upon reaching the absolute **21 Million USDT** cap, the system halts new entries and initiates the Genesis Sunset Exit Program.

Milestone	Total Aid Volume	Profit % Per Cycle	Waiting Delay	Max PH Limit
Start	\$0 – \$2.1M	30%	0 Hours	\$5,000
Halving 1	\$2.1M – \$4.2M	27%	+5% (8.4 hrs)	\$10,000
Halving 2	\$4.2M – \$6.3M	24.3%	+10% (16.8 hrs)	\$10,000
Halving 3	\$6.3M – \$8.4M	21.8%	+15% (25.2 hrs)	\$10,000
Halving 4	\$8.4M – \$10.5M	19.6%	+20% (33.6 hrs)	\$10,000
Halving 5	\$10.5M – \$12.6M	17.7%	+25% (42.0 hrs)	\$10,000
Halving 6	\$12.6M – \$14.7M	15.9%	+30% (50.4 hrs)	\$10,000
Halving 7	\$14.7M – \$16.8M	14.3%	+35% (58.8 hrs)	\$10,000
Halving 8	\$16.8M – \$18.9M	12.9%	+40% (67.2 hrs)	\$10,000
Halving 9	\$18.9M – \$21.0M	11.6%	+45% (75.6 hrs)	\$10,000
FINAL CAP	\$21,000,000	0%	STOP	BANNED

3. GAME THEORY & PARTICIPANT MECHANICS

- **The Handshake:** A mandatory Provide Help (PH) re-commitment equal to or greater than the original amount is required to unlock Get Help (GH) profit withdrawals.
- **The 2-Hour Dash:** Matched donors have a strict 120-minute window to execute transactions. Failure results in a 24-hour account ban and the instant purging of downline team bonuses.
- **Anti-Whale Protection:** Initial PH is capped at \$5,000. Subsequent individual PH increases cannot exceed **2.5x** the previous PH node.
- **Shared Funding & Outflow Clearing:** Large requests are automatically split across multiple donors, and incoming allocations are routed to clear smaller queued accounts efficiently.
- **The Testimony Lock:** Following a successful GH, dashboard functions lock until proof is submitted via a Letter of Happiness or bypassed via a \$2 USDT marketing fee.
- **Emergency Exit:** Allows participants to withdraw remaining principal only. Accumulated profits are burned, and the wallet address is permanently blacklisted.

4. PRIORITY SCORING ENGINE (THE 8 LAYERS)

The automated routing engine sorts and matches transactions using an 8-layer priority hierarchy:

1. **Layer 1: Boosted Nodes** [] – On-chain acceleration activated via a \$2 USDT fee.
2. **Layer 2: Speed Star Nodes** [] – Accounts maintaining sub-30 minute transaction completions.
3. **Layer 3: Small Orders** [] – Micro-nodes (\$10–\$100 USDT) prioritized for continuous velocity.
4. **Layer 4: Partially Fulfilled / Priority Seeker Lines** [ / ] – Routing for partially settled orders and victim nodes assigned secondary donors after a default.
5. **Layer 5: Standard FIFO Lines** – Base sequence sorted strictly by block timestamp.
6. **Layer 6: Partial Exit** [] – Step-down logic routing uncovered balances to holding states during defensive conditions.
7. **Layer 7: Handshake Lock** [] – Re-commitment pending verification.
8. **Layer 8: Emergency Exit** [] – Exiting nodes undergoing profit erasure and permanent blacklisting.

5. LEADERSHIP, MATRIX ECONOMY & BADGES

Fee Split & Matrix Allocations

A 2% platform fee is distributed across the network:

- **Direct Referral (L1):** 1.00% (Unlocked for all participants).
- **Generational Matrix (L2–L9):** 1.00% total split across 9 tiers:
 - **L1:** 0.50% | **L2:** 0.20% | **L3:** 0.10% | **L4:** 0.05% | **L5:** 0.05%

- **L6:** 0.04% | **L7:** 0.03% | **L8:** 0.02% | **L9:** 0.01%

Leadership Tiers & Web3 Certification

To unlock deep generational matrix rewards (L2–L9), leaders must complete the **Sunflower Exam** [🌻] on-chain.

- 🌻 **Guider (GUIDER_CORE):** 10 Active Direct Referrals | \$5,000 Downline Volume | Sunflower Exam Passed.
- 🏆 **Leader (LEADER_MATRIX):** 25 Active Direct Referrals | \$25,000 Downline Volume | Sunflower Exam Passed.
- 👑 **Manager (MANAGER_INFINITY_NODE):** 50 Active Direct Referrals | \$100,000 Downline Volume | Sunflower Exam Passed.

6. MULTISIG RESERVE SYSTEM (0.5% SPLIT)

- **Wallet 1: Automated Debt Safety Net (60% Allocation / 0.3 Ratio)**
Secured by a 3-of-5 multisig managed by the primary architect and certified Managers. Used exclusively to clear stuck pipeline lines during market slowdowns. Subject to a strict 10% Anti-Drain Ceiling per trigger event.
- **Wallet 2: Platform Tasks & Matching (20% Allocation / 0.1 Ratio)**
Secured by a 2-of-3 multisig. Split 50% for smart contract audits and updates, and 50% for community promoters, Zoom training facilitators, and regional tasks.
- **Wallet 3: Global News & Education (20% Allocation / 0.1 Ratio)**
Secured by a 2-of-3 multisig. Funds global training, translation infrastructure, and dApp exam grading logs.

7. GENESIS SUNSET EXIT PROGRAM

Upon reaching the **21,000,000 USDT** cumulative volume threshold, the protocol executes a three-stage terminal shutdown:

1. **Stage 1 (Gate Lock):** Smart contract permanently locks new user registrations and referral link generation.
2. **Stage 2 (Profit Purge):** Net-positive accounts are auto-deleted. Re-commitment requirements drop to 0% for exiting lines.
3. **Stage 3 (Liquidation):** The 10% Anti-Drain Ceiling is deactivated. 100% of Wallet 1 reserves clear remaining capital nodes via priority scoring. Remaining surplus is distributed via a **Time-Weighted Team Volume (TWTV)** formula (80% to certified Managers, Guiders, and Leaders; 20% to a final system token burn). The protocol terminates with a final contract balance of **\$0.00**.
